

REPORT OF ASEA UNINET STUDENT WEEK

INDONESIA 18-31 AUGUST 2019

SUSTAINABLE DEVELOPMENT

I spent two weeks in Depok, Indonesia with the sustainable development knowledge which is useful for my research in Suranaree University of Technology. The sustainable development is approached under a multi-disciplinary perspective including: Sustainable Energy, Sustainable Finance and Economics, Sustainable Infrastructure Development, Human and Organization Resources, Sustainable Technology, Sustainable Environment and Climate Change.

Besides lectures of professors in Universitas Indonesia, we also experience the interesting culture in here. We studied how to make a Batik product, play traditional musical instruments, study Indonesian language and dance the traditional dances,...We also attend field trips come BSD Sinarmasland in Tangerang city, Jakarta Smart City and Sentul green City in Bogor.

The last day in the program, students have to make a group presentation. Our group has 5 members from Italy, Malaysia and Thailand with topic "Green House _ living in symbiosis with nature". This topic showed that green house is combined between green design, green environment and green energy.

The end of the program gave me a lot of experience and learned many things not only from Universitas Indonesia but also from friends of different countries.
